

Why I Aspire to Join **BENDING SPOONS**

A Lifelong Love for Mobile Innovation

My passion for software began in high school, when I created my first app concept and even attracted interest from an angel investor.

After my first application to Bending Spoons, I decided to push myself further by building and publishing an AI-powered iOS app to understand the full product lifecycle.

With experience in backend, mobile, and AI, I'm excited about the chance to grow and contribute at Bending Spoons.

A Perfect Fit: Shared Values and Ambitions

We Aim High:

At Accenture, I learned to embrace high-pressure environments, mastering Java to deliver solid backend solutions..

We're Ambitious:

Driven by my passion for technology, I taught myself Python and Swift to build software solutions and explore programming challenges.

We Love Impact:

I've worked on projects that brought real value, from enhancing backend systems to enabling computer vision solutions.

Bringing Expertise to Bending Spoons

Innovation & Impact:

Inspired by Bending Spoons' focus on building high-impact mobile apps, I continuously experiment with cutting-edge technologies to deliver robust and scalable solutions.

Backend Development Expertise:

At Accenture, I designed and developed backend systems using Java, Spring Boot, and Hibernate, ensuring seamless API functionality and scalability.

Machine Learning & Software Development:

Implemented AI and deep learning workflows in Python, integrating models into functional applications.

Fast Learner:

When joining Accenture, I taught myself Java independently to hit the ground running—a skill I continue to use for tackling new challenges.

Excited to Contribute and Grow

Bending Spoons offers the perfect environment to combine my backend experience with my passion for AI and product development. I'm excited to contribute to your ambitious engineering challenges and grow alongside some of the most talented people in the industry.
